CHOICE NEW HOLLY Varieties

Hollies with shiny evergreen foliage and bright red berries are America's finest evergreen for landscaping. Since hollies are so sure to be in greater use, we are growing quite a number of brand new hollies as well as some of the more promising of the older sorts.

BERRIES ON HOLLIES . . .

Hollies are either Male or Female, and only the female bears berries. Many female plants will not set berries unless the flowers are fertilized by pollen from a male plant. Pollination is done mostly by bees and insects. We can supply known male Gray-way grown Holly plants in very limited numbers.

EAST PALATKA is an evergreen variety of American Holly that promises to be one of the best producers of berries and best to grow that we have tried in our nursery. We have had a number of specimen trees, some as much as \$150.00, and customers have been delighted. Few American hollies surpass this variety in the amount of berries and the regularity of bearing; and because the leaves are small, the fruit can show to fine advantage throughout the fall and winter months.

DAHOON HOLLY (*Ilex cassine*). A wonderful sight in the late fall and winter with its abundance of red berries. Native Louisiana and east. Perfectly evergreen.

ROTUNDA (*I. cornuta*, var. *rotunda*) is a dwarf form of Chinese holly, with very spiny leaves that really "look like holly." (We have not seen it fruit.) A plant is said to have reached a height of 18 inches and a spread of 40 inches in 12 years. Excellent specimen; good in planter boxes and for making low hedge. We are growing it in our nursery, and folks like it.

CHINESE HORNED and BURFORD HOLLIES (Evergreen)

These differ largely in that the Burford (*Ilex Cornuta burfordii*) usually has only one apical spine, where the Chinese (*I. Cornuta*) has three very prominent spines.

The Burfordii is very popular. Its leaf seems somewhat darker green than Chinese, and it is possibly a little more upright. Both have large, attractively colored red berries.

The Burfordii bears large red berries; whereas both berried (female) and non-berried (male) forms are found among the Chinese.

East Palatka Holly
Loaded with Berries

DWARF YAUPON HOLLY

Reaches a height of perhaps around 24 inches, maybe some taller in time, but is a true dwarf growing in the form of a hemisphere, or round cushion. We regard this as our finest dwarf plant, useful for dwarf edging, and particularly for outdoor planter boxes, where it may be kept down to a height of less than 12 inches by shearing perhaps once yearly. It does not berry that we know of. Highly attractive.

New and Unusual Hollies

Introduced by O. S. Gray Nursery

Gray's "Exclusive" Weeping Yaupon Holly

Its distinctive weeping form lends itself to many places in landscaping Japanese gardens, as an accent plant for entrances, tub planting specimens, lawn areas, etc. It may be permanently shaped at any desired height from 2 to 15 feet or more. We're growing both female (berry bearing) and male (no berry) varieties of this fine plant.

GRAY'S WEEPING YAUPON HOLLY

Gray's Little Leaf Yaupon Holly

This distinctive new Yaupon Holly, an exclusive introduction by O. S. Gray Nursery is characterized by small dark green leaves. It shears readily into any form; stove-pipe, round, pyramidal, etc. It makes a fine specimen or foundation plant, either natural or sheared. Originated in Texas. Promises to have the root-rot immunity, disease resistance, and adaptability of any Yaupon. Has never borne berries.

Gray's Compact Greenleaf Holly

Gray's Compact Greenleaf Yaupon Holly is a slow-growing, dense, compact form that has a larger, greener leaf than the usual Yaupon. Abundant red berries. This may be the answer to those who have criticized Yaupon holly for its gray-green foliage. It promises to be an excellent tub or container plant.

The World's Choicest Roses

Sometimes we are asked, "Are the patented roses worth their extra price?" We answer that to those who love roses of outstanding beauty and charm, money spent for patented roses will bring lasting pleasure and enjoyment long after price is forgotten. By all means, buy some patented roses; for without them a rose garden will lack something that it might otherwise afford.

1962 All America Roses

NEW!

NEW!

CHRISTIAN DIOR. Pat 1943. All America 1962 Hybrid Tea. Has everything! Rich, bright, crimson-red. Delightful form. Fragrant. Vigorous. Long stems perfect for cutting.

JOHN S. ARMSTRONG. Pat. #2056. A rich velvety red grandiflora. A strong, upright free-branching rose. Good foliage. Long lasting blooms.

KING'S RANSOM. PAF. Hybrid Tea. Appealing rich yellow color. Long slender buds and well-formed blooms. Good foliage. Profuse bloomer. Vigorous grower.

Patented Varieties

CHRYSLER IMPERIAL. Pat. #1167. Hybrid Tea. All America 1953. Crimson-red exhibition rose. Long tapering buds. Free bloomer. Vigorous.

NOCTURNE. Pat. #713. A very deep, rich red beauty with long pointed buds. Fine open bloom. Rich fragrance.

HELEN TRAUBEL. Pat #1028. A delightful pink and apricot blend of color. A large rose with long stems. Vigorous. Good bloomer.

TIFFANY. Pat. #1304. Hybrid Tea. Exquisite elegance in a rose--a combination of form and color which attracts which attracts and holds attention. Exceptionally long blooming. Pink with pale gold coloring.

FORTY-NINER. Pat #792. Hybrid Tea. Inside petals vivid orient-red, outside chrome-yellow. Vigorous with glossy foliage.

TIFFANY. Pat. #1304. Hybrid Tea. Exquisite elegance in a rose--a combination of form and color which attracts and holds attention. Exceptionally long blooming. Pink with pale gold coloring. Vigorous.

FASHION. Pat. #789. Floribunda. A coral-peach bloom with excellent appeal. Dainty buds and large flowers. Spreading, vigorous plant. Perhaps the finest rose of its color. Deservingly popular.

RED PINOCCHIO. Pat. #812. Floribunda. Deep satiny red. Blooms in large clusters. Upright, vigorous. A really good rose.

SPARTAN. Pat. #1357. Floribunda. Buds of burnt-orange become orange-red to reddish coral flowers. Sweet fragrance. Hardy and vigorous. Clusters of flowers all season on a strong plant. An excellent rose.

QUEEN ELIZABETH. Pat #1249 All America 1955 grandiflora. Blends of soft carmine rose and dawn pink. Tall, upright, and exceptionally vigorous. Flowers with 6 to 12" stems good for cutting. One of the finest of all roses.

Non-Patented Varieties

PINK RADIANCE. A pink rose widely planted as it does well almost everywhere. One of easiest of all roses to grow.

EDITOR McFARLAND. A standard variety. Deep pink. Perfectly formed buds. Long stems, fragrant blooms. Profuse bloomer.

THE DOCTOR. One of the largest of all rose blooms. Color uniform silvery pink both in bud and open flower.

RED RADIANCE. One of America's greatest red roses. Vigorous, hardy, healthy. Does well almost everywhere. Fragrant.

CRIMSON GLORY. Pat. has expired. Fragrant, and beautiful velvet-crimson long-stemmed blooms. Healthy foliage. Recurrent blooms.

CHARLOTTE ARMSTRONG. Patent expired. One of the finest of roses ranking among the top varieties of all time. Magnificent open blooms-vivid cerise. Lovely long buds.

ECLIPSE. Pat. has expired. Fragrant yellow rose with slim tapering buds. Blooms all season. Heavy, attractive foliage.

KAISERIN AUGUSTE VIKTORIA. A soft pearly white. Fragrant. Healthy grower. Favorite for many years.

PRES. HERBERT HOOVER. A combination orange, scarlet and yellow. Fragrant. Large. Free blooming. One of the best multicolors.

TALISMAN. Highly attractive, brilliant red and gold buds. Fragrant. Constant bloomer. A favorite multi-color rose.

PEACE. Patent expired. One of the best and most beautiful of roses. Vigorous healthy grower. Yellow buds open to large flushed pink blooms. Long lasting with broad petals and high-pointed center borne on a strong straight stem. Many regard Peace as the world's most beautiful rose.

SUMMER SNOW. Magnificent white floribunda. Continuous bloomer. Popular.

ELSE ROULSEN. Rose-pink single flowers all summer. Excellent popular floribunda.

Climbers

BLAZE. Bright scarlet blooms recurring during the summer. Hardy. Vigorous. Our most popular red climber.

ETOILE DE HOLLAND. Lovely red buds and open flowers. Strong-grower. A fine climber.

Shade Trees

Live Oak

Well-adapted. Immune to root-rot. The aristocrat among our ever-green trees. Many over 100 Yrs. old are known.

Red Oak

Widely adapted to soils and conditions. Beautiful red leaves in fall. Long lived. Shapely and attractive.

Large Size Shade Trees

Sizes up to 6 inches or more in diameter and 25 to 30 feet high -- save you years of time. Select them at our nursery. They provide shade quickly for new homes - make nice gifts.

Sycamore Native Texas tree highly resistant to root rot, alkalinity, heat and drought. Beautiful upright growing shade tree having large light green leaves and white colored trunk and limbs. A fast grower.

Silver Maple Wide-spreading, slender branches, grows best in moist soil, but succeeds almost anywhere. Deeply cleft leaves, green above, silvery white beneath. Rapid grower.

Burr Oak A majestic tree with a naturally strong framework of limbs. Has very large acorns borne in fringed cups. Large lobed leaves.

Sweet Gum Glorious fall colors, attractive corky bark.

Chinese Chestnut Trees

Chestnut trees hold their leaves most of the winter. Blight resistant. Chestnut trees are native to upland, and will grow on poor soil-though like any other tree will do better on good soil. They bear very young, often producing a few nuts the second or third season. 2 to 3 ft....\$1.96 - tax

"The Grayway is the Best Way"

Ornamental Trees

REDBUD. A favorite ornamental tree with its mass of red or pink blossoms covering the limbs in March or April. Few, if any, flowering trees surpass it for sheer beauty. Classed as a dwarf tree, growing to about 25 ft., but also grown as shrub. We have some very choice specimen redbud trees from which to select

CHINESE REDBUD (*Cercis chinensis*). Someone said, "If you've never seen a Chinese Redbud, you just don't know how startlingly beautiful a Redbud can really be." Flowers much larger than the ordinary redbud; the tree grows more shrubby like with us. Asiatic origin. Individual blossoms sometimes $\frac{3}{4}$ -inch in length. Only a few specimen trees;

WEeping WILLOW. This graceful tree, with plenty of moisture, is a very rapid grower and creates a picture, lovely to behold. Our supply is uncertain, but we usually have a limited number in stock.

RED LEAF PLUM, variety **THUNDERCLOUD** so far as we have seen, the outstanding red-leaf plum.

FLOWERING PEACH. Double red and white. double pink flowers

SOUTHERN MAGNOLIA

MAGNOLIAS (Cannot be shipped).

Grandiflora. The southern evergreen magnolia. Large fragrant waxy white blossoms, available from 95c to \$100.00.

We have some nice, attractive specimen Magnolias in our fields at from \$15.00 to \$100.00 B&B.

FLOWERING CRABAPPLES

ELEYI. Reddish foliage in spring. Single pink flowers followed by red fruit. One of newer varieties becoming popular.

HOPA. Upright grower. Mass of large, fragrant, rose-colored flowers appear ahead of leaves, followed by pretty red apples that are good for jelly. Planted extensively.

ALMEY Sensational! New! Said to be the most beautiful flowering crabapple of all. Tree upright, hardy, vigorous; scarlet flowers. Often blooms same summer it is planted. Crimson fruits often last into the winter season.

WHITEBUD

A pure white "redbud"

Similar to regular redbud, but flowers of purest white
Scarce. Very lovely.

(SILK TREE) MIMOSA

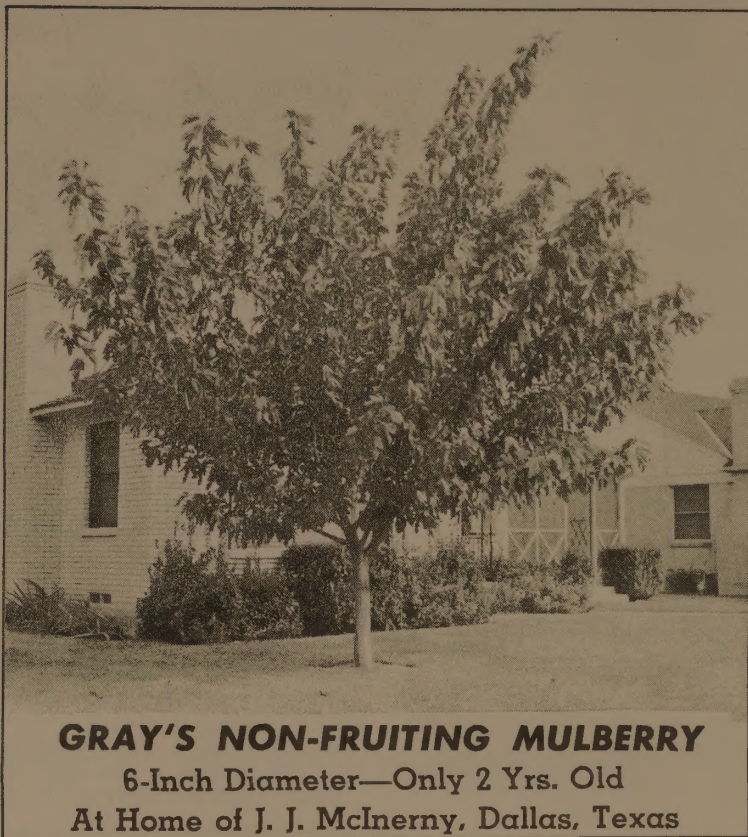

A rapid growing tree with spreading branches and low, flat-topped head. Fine, feathery foliage; profusion of pink flowers in early summer for period of several weeks. A very useful and ornamental tree that is much in demand because of its ornamental effect where dense shade is not desired. Grows to height and spread of about 25 ft.

Shade in a Hurry

GRAY'S NON-FRUITING MULBERRY
 6-Inch Diameter—Only 2 Yrs. Old
 At Home of J. J. McNerny, Dallas, Texas

One of the most rapid growing trees we know of. Have seen it grow 15 feet in one year. Has a smooth, attractive trunk with large dark green leaves. Absolutely non-fruiting. Promises to fill a need for a really good rapid growing shade tree. Young trees sometimes tender in the fall, but mature trees seem perfectly hardy, having taken the temperature of 8 degrees a few years back.

GRAYWAY-GROWN
PAPERSHELL PECAN TREES
to One Customer**

**A TREE FOR
EVERY MEMBER
OF THE FAMILY**

Why not plant a GRAYWAY Papershell Pecan Tree for each member of your family? Children will thrill to the idea of possessing a tree, of having a GRAYWAY Papershell Pecan Tree actually planted for them. Why not let the tree and the child grow up together? What finer home-tie? What better psychology than the suggestion that your child strive to develop a character as sturdy and stalwart as the tree you have planted for him?

NINE ACRES OF
"MORE MERCHANDISE FOR LESS MONEY"

December 18, 1953

Dear Mr. Gray:

In reminiscing the years that I have known you, beginning in 1932, it is a pleasure to remember back the fine business relations I have had with you, and certainly hope and feel they will be in the future as pleasant and profitable as they have been in the past.

I am sure you are aware of the fact that over the period of years I have purchased some 20,000 pecan trees from you, and would like to say that I was well pleased with your trees when I purchased them and that they have grown up to be mature trees in keeping with our expectations. If it was all to do over again, I see very few changes that I would make in my planting of the orchards, and would like to take this opportunity for thanking you for the good advice and services that you furnished with the planting of these orchards.

Here's hoping that your success continues.

Respectfully,

OPT-1-JB

P. P. Leonard

(See NOTE)

GRAY'S Machine Dug Pecan Trees

Gray's gigantic pecan tree digger and the fine root system it digs for "Grayway-Grown" trees.

Designed and built for use in our nursery, this giant machine can dig about 1,000 trees per day.

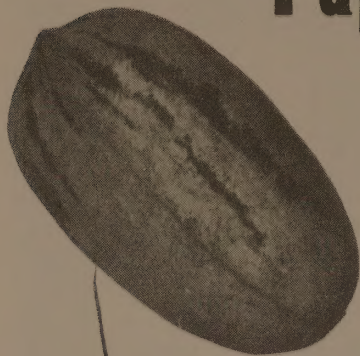

Grayway-Grown

Papershell Pecan Trees

NEW VARIETIES

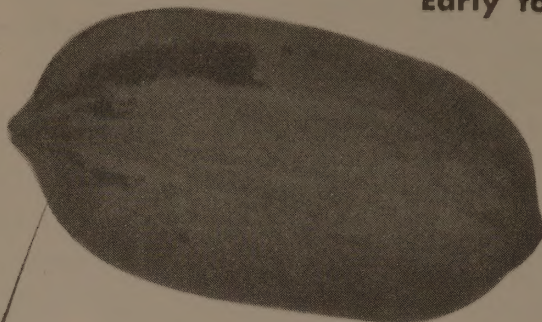

Easy to Live!

Early to Bear!

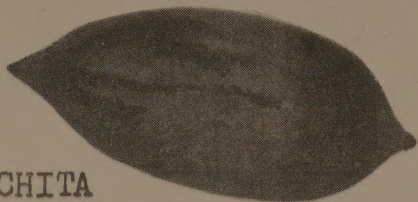

BARTON

A Success-Moore cross made by Mr. L. D. Romberg of the USDA to combine disease resistance with the size and excellent kernel qualities of Success. Thin shell, good cracker, and very attractive. Widely adapted. About 55% kernel; 45 - 50 per pound.

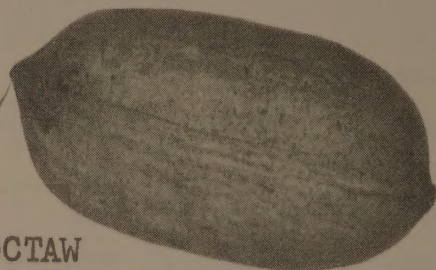

GraKing—Nearly as large as Mahan, but seems to fill better and to be more cold resistant. An early, heavy producer. Original tree in Hugo, Oklahoma. Very large, attractive nut with good kernel qualities. GraKing and Stuart were the only trees in our nursery not injured in the severe freeze of 1950. About 52 - 54% kernel. Our introduction.

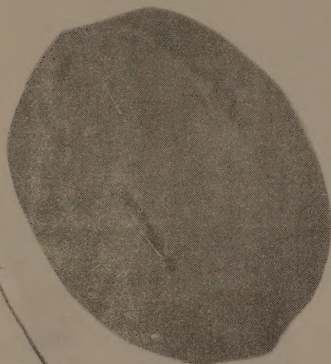

WICHITA

A Halbert-Mahan cross made by the U.S.D.A. Unusually attractive. Very heavy producer. Medium size. About 60 per pound. Thin shell.

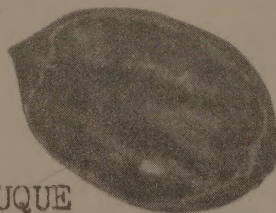

CHOCTAW

A Mahan-Odom cross by the U.S.D.A. Large, thin-shelled good quality nut that should be disease-resistant

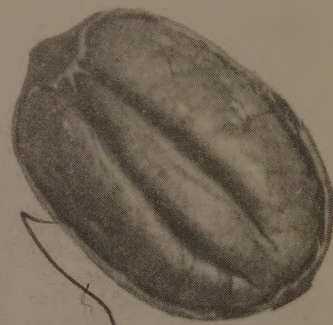

COMANCHE

A Burkett-Success cross made by the USDA. It resembles Burkett, but is more disease resistant and is a better keeper. Vigorous grower. Starts growth later than Burkett. Bright kernel. About 55 - 58% kernel; 40 nuts per pound.

PERIQUE

From St. Charles, Mo. Thin shell; excellent quality; good producer. Ripens here early about 4 to 6 weeks ahead of our standard varieties.

GraTex

A Success-Ideal cross. Extremely thin shell. Plump, highly flavored kernel. Good Producer. Strong growing tree. Our introduction.

New Varieties  cents extra

50

Papershell Pecan Varieties

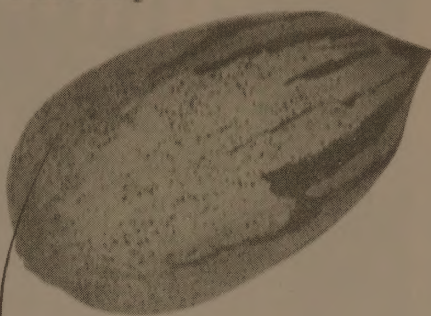

DIRECT from our Nursery

TO YOU

GIANT MAHAN—Perhaps the largest of all papershell pecan varieties. Sometimes 3 inches long; thin shell, vigorous grower and a heavy producer. Usually does not fill out very well, but nuts look like bananas hanging on tree. A good grower that makes an excellent shade tree for the home.

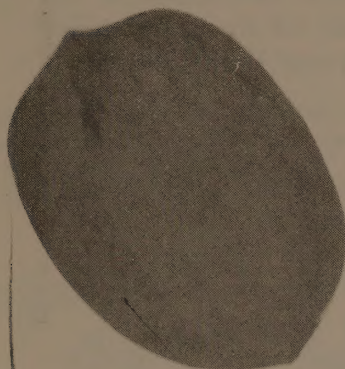

BEAUTY

DESIRABLE—One of the largest. Excellent cracker; early bearing; promises to be one of heaviest producers; thinner shell than success.

SHADE

NUTS

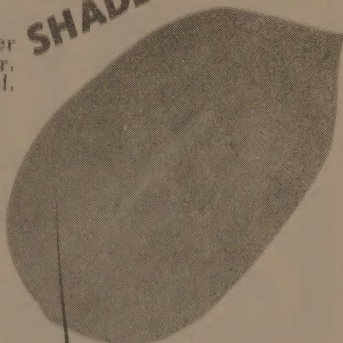

STUART—Old variety, safely used over wider territory than probably any other. Large size. Medium shell—48-50% kernel. Early ripener.

BEAUTY

SUCCESS—Most popular eastern variety in Texas. Large—40 per pound; medium shell; 52% kernel. Fairly early producer; ripens uniformly in mid-season. Buds late in spring.

SHADE

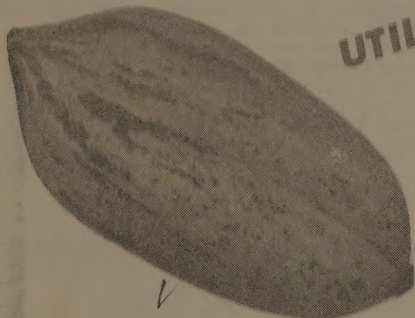

BRAKE

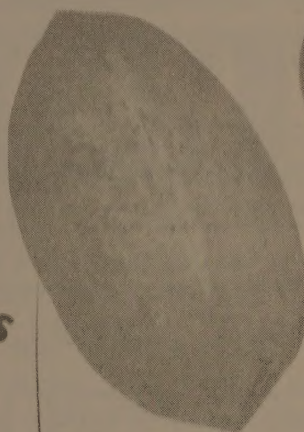

Extremely thin shell; high quality. About 65% kernel. Attractive yard tree. Medium size; resembles GraTex. The first patented pecan.

UTILITY

NUTS

WESTERN SCHLEY—Early and heavy producer; about 55 per pound; 60% kernel. Moderately early ripener; vigorous grower; good yard tree.

DELMAS—A good producer of large nuts that shell out easily. Upright growth and large green leaves make it one of our most attractive yard trees. Ripens a little too late for Oklahoma.

NEW SCIENTIFIC ROOT TREATMENT

A PRODUCT OF MODERN RESEARCH

The photographs speak for themselves. What a difference! Here you see treated (right) and untreated roots of pecan trees, same age, transplanted, then dug up at the end of the first season. Observe amazing new root growth stimulated on TREATED roots shown at right, compared with roots at left that had no treatment.

The O. S. Gray Nursery is the first to offer this new scientific Chemical Root Treatment developed by workers in the United States Pecan Laboratory in Texas. Remember—you may obtain GRAYWAY Papershell Pecan Trees with this scientific chemical root treatment.

SAVE!

by using "B" GRADE TREES

"B" GRADE TREES are just as good fundamentally as the Standard "A" Grade except they have trunks or tops not straight enough to be put in the top grade, some of them have a slight wound or skinned place that will heal over and not hurt the real worth of the tree. If you are planting an orchard and want your money to go as far as possible and don't mind staking a few trees, we recommend the "B" Grade trees for your consideration. It is the grade that I nearly always use in my own orchard planting, for experience has shown me that crooks in young trees don't amount to much as they grow out naturally as the tree gets older.

We have been selling "B" trees for many years to customers who have come to the Nursery where they could see them in person, but we are now listing them in our catalog. They are real "economy trees."

"B" grades take the price of the next lowest size. For example, a \$4.95 size tree in "B-grade" would be priced at only \$3.95; or a \$10.50 size in a "B grade" would be \$7.95, etc.

"C" GRADE TREES are too crooked for the "B" grade—often have tops bent over at quite an angle and need staking for a year or two. Some have a short root or a split limb, etc. If you have a piece of hazardous bottom land or a field where you don't want to spend much money for trees, perhaps the C-grades will fill the bill. They usually sell for about half price, and a good per cent of them should develop into nice trees.

See, also, specially priced pecan trees on page 15

You CAN GROW PEACHES

Listed approximately in their order of ripening

CARDINAL. Developed and introduced by the U. S. Department of Agriculture. The earliest yellow-fleshed clingstone. Attractive. Firm enough for shipping. Plenty of red color.

REDCAP. Developed and introduced by the U. S. Department of Agriculture. Resembles Dixired but ripens day or two earlier. Clingstone. Attractive red blush at shipping stage. Good flavor, melting yellow flesh. Useful for winters without enough cold for Dixired.

DIXIRED. Introduced by U. S. Department of Agriculture. Nice size, clingstone. Highly colored with attractive red, firm, yellow flesh. Shipping. Softens slowly. Very attractive market peach, coloring before ready for picking. Now established as one of the most profitable peaches, some bringing \$6 to \$8 per bushel. Tree vigorous and productive.

DIXIGEM. A fine, attractive, early-ripening yellow-fleshed freestone introduced by the U.S.D.A. Widely planted, highly profitable.

RANGER. One of the newer U.S.D.A. introductions. Yellow-fleshed freestone, ripening about 4 weeks before Elberta. Superior to Golden Jubilee.

MAMIE ROSS. Semi-cling. White flesh. Melting, juicy and sweet. One of the finest of all table peaches. Too soft for shipping.

The peach is one of the easiest fruits to grow for home use, and it is almost impossible to buy peaches to compare with the juicy, delicious, tree-ripened fruit right off your own trees. Why pay up to 15c to 20c per pound for peaches at the store when you can gather from 100 to 150 pounds from a single tree at your home?

✓ **RED GLOBE.** A highly colored new yellow flesh freestone of good quality. Tree productive, vigorous. Ripens 2 weeks before Elberta.

✓ **HALEHAVEN.** Large, beautifully colored, prolific, hard. One of our very best early freestone yellow-fleshed shipping or home peaches. A most profitable commercial variety. Good shipping or canning. Ripens two weeks before Elberta.

✓ **JULY ELBERTA.** Similar to Halehaven, but can be used farther south.

✓ **REDSKIN.** A yellow-fleshed freestone ripening with and superior to Elberta in quality. Its low chilling requirement also permits it to be used farther south than the Elberta. A heavy producer.

✓ **ELBERTA.** The old reliable, well-known, yellow-fleshed freestone familiar to everybody. Has been the most widely planted peach in the world.

✓ **PERKINS.** Yellow flesh freestone ripening about 1 week after Elberta. Excellent quality. Originated by the late J. A. Evans at Arlington, who claimed this the finest of all peaches ripening in its season.

✓ **FRANK.** A yellow-fleshed clingstone of high quality, ripening 10 to 14 days later than Elberta. Does well farther south than Elberta. Highly attractive coloring, delicious flavor. Productive and fairly hardy.

✓ **INDIAN.** Red fleshed, highly colored clingstone.

Our Prices are Not Prepaid unless specifically stated, and are subject to change at any time without notice.

BEARING PEACH TREES

We have several varieties of large peach trees 8 to 10 ft. high here at the nursery that have already borne peaches.

IT'S NEW!

Gray's Tripl-Tree Peach Orchard

If you have room for 1 tree plant a Gray's Tripl-Tree Orchard.

This 2-yr old TRIPL-TREE ORCHARD in Arlington had a nice crop of peaches 2nd summer from planting.

Planted in Less Than
a Square Yard

Plant 3 trees spaced about
18 inches apart
in one hole, removing
all the inside branches.

Use 3 different varieties, ripening about
2 weeks apart to provide
peaches for almost six weeks

Two Tripl-Tree Orchards (6 trees) will
provide ripe peaches
almost through the entire peach season.

Gray's Tripl-Tree Orchard

For Only

\$7.49

Postpaid to Tex.-Okla.-Ark.-La.

- 1 Variety ripening in early June.
- 1 Variety ripening in late June or early July.
- 1 Variety ripening middle to late July.

4 to 6 ft. trees

Two TRIPL-TREE Orchards occupy little space and supply you with delicious home-grown peaches nearly all season

THE HOLLAND APPLE

(Same as Summer Champion)

Discovered in an old apple orchard near Weatherford, Texas, by the late R. B. Alexander, this apple, first called Kincaid, was later popularized as Holland. Tests have shown it to be identical with an old variety, Summer Champion.

Holland promises to be the basis of a commercial apple industry in Texas, especially because of its huge size, attractive appearance, early production and the fact that it comes on the market in late July when apples are scarce and bring good prices. It is self-fertile (You don't have to plant another tree nearby it to make it bear), and what we'd call an "all-purpose" variety, half-way between the best eating apple and a cooking apple. Rarely fails to fruit the second year after planting.

DOUBLE RED DELICIOUS. Well-known; grown from coast to coast. Requires a pollinizer (Any other variety will do).

YELLOW DELICIOUS. A well-known, outstanding apple. Juicy, crisp, sweet flesh.

Apricots

MOOREPARK. Adapted to wide area. Used Commercially. Freestone of good quality.

SUPERB. One of the largest, orange colored fruit. Freestone has been one of the best in our test orchard, and we recommend it highly as a result of its good showing.

EARLY GOLDEN. A Thrifty, prolific apricot that has given some people better results than any other. Freestone.

Grapes

FREDONIA. A large, black grape that is replacing Concord in many parts of the country. Quality equal to or superior to Concord. Large bunches of large grapes. Heavy producer. Is the No. 1 grape of our section.

CONCORD. Too well known to need description. No other grape seems to have exactly what we call the "Concord flavor." Widely grown for juice and fruit.

THOMPSON SEEDLESS. A well-known sweet seedless grape.

Persimmons

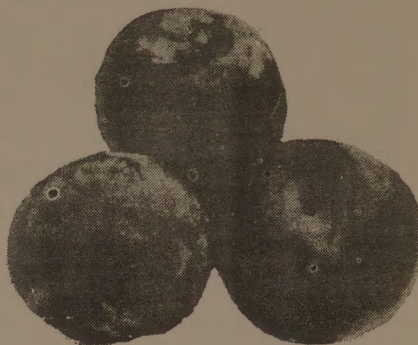

One of the most delicious fruits grown in the South. Good for home or market.

EUREKA. Fruits look like large red tomatoes. Almost seedless. Delicious flavor. One of the very best for home use.

TANE NASHI. Large fruits shaped like an acorn without the cup. Seedless. Fine quality for market or home.

Plums

BRUCE. Very large, very red. All-purpose eating or cooking. Good market and shipping. Has been one of the most profitable plums. Bears young; prolific.

METHLEY. Dark purple skin, purple flesh. excellent producer and undoubtedly one of the most delicious.

SANTA ROSA. The big, purple plum that is shipped from the west coast. Firm flesh, fine eating.

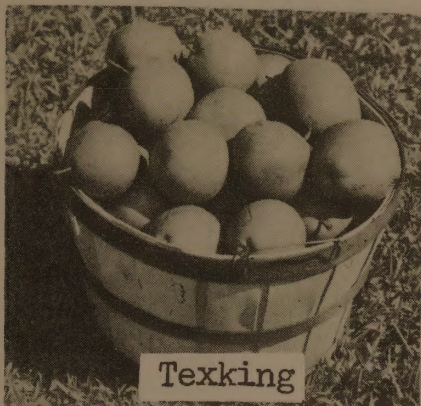

UNCLE SAM A GRAYWAY CUSTOMER

This large shipment of Grayway-Grown Papershell Pecan trees was for the United States Government, Department of Agriculture, for one of the Government's experimental papershell pecan orchards.

PEARS

ORIENT

Texking

**A New Pear that's Good to Eat
Blight-resistant for the South**

The **ORIENT PEAR**. For over 100 years, pear breeders have been trying to develop a blight-resistant pear of good quality for the South. The **ORIENT** was developed by the Tennessee Agricultural Experiment Station. Trees are healthy, vigorous and **enormous producers** of greenish-yellow fruits that ripen in mid-August. Flesh is melting and juicy; flavor mild, sweet and sub-acid. Excellent for canning and a good salad pear.

YES! IT'S TRUE!

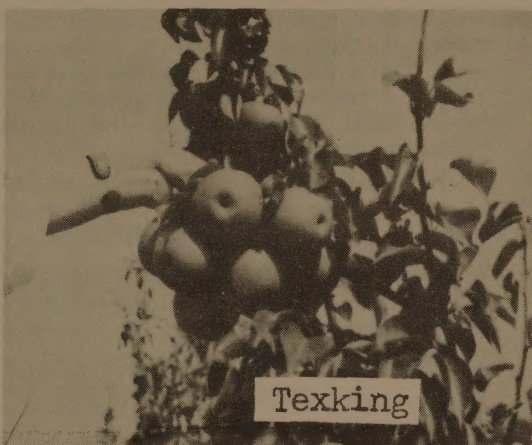

**The Amazing Story of the
GRAYWAY**

"TEXKING"
THE NEW PEAR
CREATED BY A COW!

TRUTH IS STRANGER THAN FICTION

The cow managed to get the rope wrapped securely around the young pear tree, breaking it off beneath the ground a green sprout appeared from below the graft this sprout soon began to bear pears. Experts in the U. S. Dept. of Agriculture said that so far as they knew, it was unlike any named pear variety.

The cow had created an entirely new pear—little trees only 3 to 4 feet high bear heavily. Fruits large, russet in color, and gets sweet on the tree. Ripens early and keeps a long time. I have kept them in my refrigerator until after Christmas. Flesh smooth with practically no grit. It's grand for canning and preserving—and tastes mighty good right off the tree. We have never seen a pear produce more heavily.

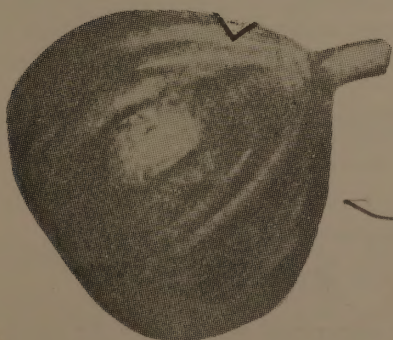

Texking

BARTLETT PEAR. The well-known dessert pear. Blights in Texas, but many people want to plant it because of its eating quality.

GRAY'S IMPROVED KEIFFER PEAR. This fine strain of Keiffer has been having heavy crops the third summer in the nursery rows. It has been considered the best pear we can grow for sure production for preserving. When ripened in storage, it is delicious, too. Ripe, September.

FIGS THIS SUMMER

Grayway **TEXAS EVERBEARING FIGS**

Produce Delicious Figs

the First Summer

Gather your own figs this coming summer from Grayway-Grown **TEXAS EVERBEARING** fig bushes. Bear from July 'til frost. Fruits nice size, straw-colored, sweet flavor. Rarely crack open like a lot of other kinds do. Excellent for eating right off the tree, and for preserving.

Gray's Everbearing

EASY TO GROW!

STRAWBERRY PLANTS

*Enjoy This Delicious Fruit
From Your Own Garden*

Gray's Everbearing Strawberry plants bear the first summer, with a full crop the following year. They live out-of-doors during the winter, and are normally evergreen. A strawberry bed with an inexpensive ornamental curb is an attractive landscape feature.

"Best time for planting is January 15th to February 15th, for then they don't bloom too soon. Plant 8 inches apart in the row, rows 3 inches above the level. Irrigate down the middles (rows 24 inches apart). Fertilize with well rotted leaf loam, or with well rotted manure. Fresh manure will burn up the plants if you are not careful. SAW-DUST is one of the best materials for mulching in the row as it keeps the berries up out of the dirt. Late in the season, let the berries rot on the vine and the plants will go to making runners and new plants.

GEM EVERBEARING

Widely grown, immensely popular. We have selected Gem as one of the finest varieties for this section. It will not disappoint you 10/1.29 30/2.98

Price 25c. ea coin or stamps.

LASSEN STRAWBERRY A new California strawberry that has been quite a sensation. We are growing them in 4" pots so that in season, we can supply them already fruiting. An intermittent bearer Spring to Fall. Heavy producer. Available at the nursery only--15¢ea.

EARLY WONDER BLACKBERRY. (Same as Dew-Black). We recommend this as the best of all blackberries. Tasty, sweet, disease-resistant, and a marvelous producer.

AUSTIN DEWBERRY. For many years our leading dewberry.

POSTPAID

5 of either \$1.25; 10 for \$2.25
20 for 4.25 postpaid.

BERRIES

GRAYWAY'S GIANT THORNLESS BOYSENBERRY

The largest berry we have ever grown. Think of raising berries two inches long! We could hardly believe our eyes when we first saw them. Hardy, vigorous canes 15 to 20 feet long, covered with enormous berries

growing on a trellis, up and out of the dirt.

• Not many seeds. A distinctive flavor reminding of combination loganberry, blackberry and raspberry. Firmer for shipping and canning than Youngberry.

MAIL YOUR ORDER TO US

It's Easy to Order by Mail

Had you ever thought how easy and how cheap it is to order by mail. You make out your order right in your own home, and a 3c stamp brings it straight from you to us. You can also telephone orders to us.

Ordering by mail is also a time saver. If you live in Northern Oklahoma or Southern Texas, it might take you two days to drive to the nursery and back—but a 3c stamp can bring your order while you stay at your regular work. Send all mail orders to Arlington.

OUR GRAYWAY GUARANTEE

We have been growing and selling nursery stock for something like twenty-five years, and our thousands of satisfied customers and friends are the result of our way of doing business.

We guarantee our GRAYWAY plants and trees to be in first-class, livable condition when they leave the nursery, but do not guarantee them to live or grow. We exercise greatest care to keep our varieties true to name, and should any plants sold by us prove not true to name, they will be replaced or the purchase price refunded upon proper proof. It is mutually agreed between us and our customers that we will in no way be liable for more than the original purchase price. We give no other warranty, expressed or implied, unless in writing and over the personal signature of O. S. Gray or of O. S. Gray, Jr.

Our prices are not guaranteed, and are subject to change at any time, without notice.

It's NEW!

The BRAZOS Blackberry

Early Ripener

Heavy Yields

Large Fruits

Erect Canes

Firm Berry

Vigorous Grower

Disease Resistant

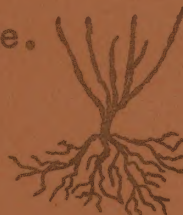

A new, erect blackberry, named Brazos, has been released by the Texas Agricultural Experiment Station. Growers prefer the Brazos because of high yields and long ripening period. Its long ripening period will permit more orderly marketing. The attractive Brazos fruit is early, large, and firm, which should cause it to be a popular fresh market fruit. Brazos inherited characteristics from the wild dewberry and the Brilliant Red Raspberry from which it was developed.

Crape Myrtle

THE SOUTHLAND'S *Finest Flowering Shrub*

Visitors to the Southland marvel at the striking beauty of our Crape Myrtle. The ease with which it may be grown, its long flowering season and its variety of attractive colors have long made it a great favorite.

Gray's "Red Beauty"

Gray's "Snow White"

Gray's "RED BEAUTY" Mildew-Resistant Crape Myrtle

We have stood amazed at its large blossom heads, almost a foot in length. Its marvelous coloring seems to leave nothing to be desired. Truly an outstanding red crape myrtle of wonderful beauty. This attractive watermelon-red crape myrtle has been practically free of mildew while growing right beside the common red that was so full of mildew that it seemed "white with frost." When mildew disease strikes crape myrtle, it stops blooming. We have never had to spray or dust the Red Beauty for mildew.

The origin of this particular crape myrtle plant is something of a mystery. It first became known when a crippled grower made his living peddling plants in full bloom, growing them in old tubs and buckets, carrying them from place to place with his horse and buggy.
